THE TENSION

Most infrastructure teams optimize for the headline instead of system architecture.

INSIGHT 2

**Leverage Web-Scale Knowledge.
Stop restricting agents to closed
datasets. Modern LLM agents use
vast web intelligence to navigate
complex, multi-variable ESG and
grid telemetry dynamically.**

INSIGHT 3

2. Track grid carbon intensity at 15-minute telemetry intervals.

INSIGHT 4

**3. Shift heavy workloads
dynamically during clean energy
peaks.**

INSIGHT 4

4. Automate closed-loop evaporative cooling systems for water efficiency.

4

64 gCO₂/kWh

Measured carbon intensity reduced to 64 gCO₂/kWh (60.2% clean power).
